

# Weigh time critical and immobile patients instantly, accurately

- The Patient Transfer Scale is a transfer board with an in-built weighing scale. It provides a weight reading whilst transferring a patient from trolley to bed or bed to bed
- A more dignified way of weighing, reducing stress for patients
- It's part of an existing, embedded process: quick and easy, saving time
- Provides an accurate weight when it's critical for safe medication management and monitoring of patients

EU PATENT PENDING

# The Patient Transfer Scale:

## A revolutionary solution for weighing time critical or immobile patients quickly

### Key Features

93/42/EEC Medical  
Devices Directive  
Approved  
2014/31/EU  
Non-Automatic  
Weighing Instrument  
Directive Class III  
Approved  
Large weight display  
Portable  
Wipe clean surface  
Hold-of-weight feature

### Specifications

Capacity: 250kg  
Graduations: 500g  
Power: Internal  
rechargeable battery  
Battery life: 50 hours  
Weight: 11kg  
Dimensions: 1800mm  
x 700mm x 30mm  
Product code: M-999

**MARSDEN**

- The idea of the Patient Transfer Scale (PTS) was born of frustration: An NHS Lanarkshire nurse working in Emergency Care was determined to find an easier way to weigh immobile patients
- Healthcare professionals have a duty of care to ensure a safe environment for patients, whilst maintaining their dignity. The PTS provides clinicians with confidence, providing an instant, accurate weight
- The Patient Transfer Scale means you no longer need to estimate the weight of a patient
- A patient's weight can be critical to delivering the right care and treatment at the right time
- Tested in over 30 hospitals, the PTS' final design is based on feedback from healthcare professionals
- The PTS is lightweight and portable and can be taken to exactly where your patient is
